

“Cleanic: Clinical use of a recognised prophy paste with Perlite”

Dr. Fabio Cosimi D.D.S.

Dr. Susanna Giovannini D.I.

I-Ostia Lido, Rome

Cleanic[®] prophy paste by Kerr has a creamy and smooth consistency. It also has a pleasant fresh taste that is not too strong and is well accepted by the patient.

This creaminess and the clever use of binding agents have made the paste easy to use. Available in a tube, used with both cups and brushes, the paste stays more compact on the tooth surface, thereby avoiding the unpleasant sensation caused by coarse particles left in the patient's mouth.

Within a few seconds after application (during the cleaning cycle), Cleanic[®] paste removes extrinsic dischromia caused by clorexidine or stains caused by cigarette smoke.

(If either of these are present in a patient at a recall of 6 months, the application should be repeated).

About 8 seconds after application, the paste automatically starts its polishing action thanks to Perlite technology making the tooth appear smooth and shiny.

After our usual professional oral hygiene procedures (debridement, scaling and root-planing), Cleanic[®] paste, compared with others on the market, seems to be less apparent in the gingival sulcus.

Pro-Brush[™] new generation brushes are very suitable for patients with dental overcrowding or malpositioned teeth. Plastic replaces the traditional metal part and allows the brush to rotate more efficiently. This helps to prevent damage to adjacent teeth.

Pro-Cup[®] cups have been designed and developed to avoid pastes being splattered as with traditional cups.
